Eavesdropping Countermeasures - TSCM

Q. What is a Countermeasure ?

Answer: Countermeasures are all the devices and techniques used to impair the operational effectiveness of an adversary.

Electronic Eavesdropping or “**Spying**” is not confined to secret agents. The devices required for wiretapping and

electronic eavesdropping are available to anyone through Internet advertisements, eBay, spy shops, etc. Very sophisticated bugs can be constructed by anyone with a basic knowledge of electronics, and components obtained from any electronics store (ie. Radio Shack store). They are inexpensive, small, can be bought by anyone and hidden in minutes.

COMSEC LLC provides Professional **Bug Sweeps - TSCM - Eavesdropping Detection** and **Anti-Surveillance** services for Government offices, corporations, private individuals, celebrities, executives, conference rooms, hotel rooms, private or corporate vehicles, private aircraft, yachts, etc. Specially tailored **Technical Surveillance Counter Measures TSCM - Bug Sweep services**, are conducted to stop leaks of your confidential information, business strategies, cost and pricing structures, competition sensitive information, contract negotiations, trade secret and other highly valuable information.

What is a TSCM - Bug Sweep ?

A **COMSEC LLC –TSCM Survey - Bug Sweep** typically includes the following:

- A *Technical Threat Analysis (TTA)* threat analysis, including identification of parties who may wish to spy on your business, gain access to competition sensitive information and undermine your security protocols.
- A *Telephone System Analysis* including instruments, incoming trunks, in-house cabling, and peripheral equipment and testing for intercept devices such as a phone or wire tap.
- A *Radio Frequency (RF) Spectrum Analysis*, including recognition capabilities for digital, spread- spectrum, and frequency-hopping transmitters in addition to standard analog devices.
- An *Infrared (IR)* search of all interior and exterior vulnerable areas.
- An *Electronic Inspection* for covert video transmission via hidden camera.
- A *Carrier Current Analysis* of AC outlets, telephone cable, and other wiring to detect devices capable of transmitting communications.
- A *Physical Search* of the target site for hidden microphones, transmitters, audio recorders, closed-circuit television (CCTV) systems, and any other technical surveillance devices.
